

# **Today's Payment Ecosystem**

The payment market is comprised of many network providers that offer payment methods to merchants.

The network providers hold onto their proprietary technology, have limited geographical coverage and accept only a few payment methods.

The result is a severe hindrance to the free-flow of Global Commerce.

- Customers want to pay in a shop or online but the merchants do not accept the payment type.
- Merchants want to sell to all customers but they cannot accept all payment methods.
- Payment Types want to be accepted everywhere globally, but it is not straightforward.

## **The Hazza Newtwork Global Unified Payment Network**

The Hazza Network will solve the problems of the current payment ecosystem by open sourcing OCTO3's proven, Omni-Channel payment network technology.

This will create one decentralized

global payment platform which can accept any payment method and be used by anyone, from small retailers to large e-commerce business.

The aim of the Hazza Network is to make global commerce a seamless experience at a lower cost for all its participants. Hazza Network members will be able to access multiple existing payment networks, reach markets around the globe and save costs.

The plug-and-play nature of the platform ensures quick implementation and immediate deployment.

- All major card brands.
- Over 10 European alternative payment methods (APMs).
- Over 20 Asia APMs.
- Over 130 Transaction currencies.
- Local processing in 30 countries.

platform to access, process, view and manage all transactions types, including ecommerce, physical PoS, mPoS, MOTO, coupon, and loyalty.

# implementation. White-labeled to enable PSP branding for their merchants.

## **Blockhain Technology**

The payment market is comprised of many network providers that offer payment methods to merchants.

The network providers hold onto their proprietary technology, have limited geographical coverage and accept only a few payment methods.

The result is a severe hindrance to the free-flow of Global Commerce.

- Customers want to pay in a shop or online but the merchants do not accept the payment type.
- Merchants want to sell to all customers but they cannot accept all payment methods.
- Payment Types want to be accepted everywhere globally, but it is not straightforward.
